5. Managed objects & events 2

1. Overview

Admin Logger is a Magento extension designed to log every changes made on Magento Back office such as product, category, taxes creation, changes or deletion.

Each action is logged with data and user.

2. Integration

To install extension, please process this steps :

- Copy folder app/code/local/MDN/AdminLogger to app/code/local/MDN
- Copy file app/etc/modules/MDN_AdminLogger.xml to app/etc/modules/
- Copy file app/design/adminhtml/default/default/layout/AdminLogger.xml to app/design/adminhtml/default/default/layout
- Copy folder app/design/adminhtml/default/default/template/AdminLogger to app/design/adminhtml/default/default/template
- Copy file app/local/fr_FR/AdminLogger.csv to app/local/fr_FR
- Refresh Magento Cache
- Log out and log in from magento admin (to avoid Access Denied error)

3. Settings

To configure settings, select Menu System > Configuration > Admin Logger.

Note : if you get « access denied » error, you have to log out and log in again to refresh permissions.

Parameter	Description

Enable	Enable or disable logs
Auto prune	If enabled, logs are pruned every X days
Auto prune delay	Delay before pruning logs
Force orig data	In some case, Magento architecture doesn't allow to know what changes are made on an object. To be able to log changes, this feature overrides such features magento behaviours. However, this may cause troubles with specific extension.
Fields to ignore	Field name for which we do not log changes
Object type to ignore	Magento object type for which changes are ignored
Force orig data	Magento object type for which system must load original data (useless if force orig data is set to false)

4. How to use

TO view logs, select menu "System > Admin logger"
